BC Hydro Awards Electricity Purchase Agreement to Syntaris Power Corp.

Vancouver, British Columbia— Syntaris Power Corp. (Syntaris) is pleased to announce that the company has been awarded an Energy Purchase Agreement (EPA) for its hydroelectric project located at Culliton Creek, approximately 20 kilometres north of Squamish.

Upon completion, the Culliton Creek Project will generate an estimated 15 megawatts of renewable electricity, sufficient to power 7,400 homes in an average year. The project will also benefit the local community through the creation of an estimated 200 person-years of employment during the construction phase and provide a significant long-term revenue stream for government through the payment of annual taxes and other fees during operation.

“This announcement is a substantial step forward in the development of our company,” says Syntaris CEO and President Robert Fraser. “It confirms our faith in the quality of our projects and of our dedicated team of experienced professionals. We are eager to begin the construction phase on Culliton Creek and to conclude negotiations with BC Hydro on our other projects.”

Culliton Creek is one of three hydroelectric projects that were submitted by Syntaris Power to the Clean Power Call in 2008. The Kinskuch Hydro Project (76 megawatts) is still under consideration by BC Hydro. The projects were developed and submitted in partnership with HydroMax, the BC division of the Calgary-based utility Enmax.

Syntaris is committed to working with First Nations partners to build sustainable projects that will bring long-term socio-economic benefits for future generations. These benefits include employment and skills training as well as new business and recreational opportunities.

This project qualifies as clean or renewable energy in accordance with the guidelines published by the BC Ministry of Energy, Mines and Petroleum Resources. For more information on the Culliton Creek Project click [here](#)

About Syntaris Power Corp.

Syntaris Power Corp. is a Vancouver-based green energy company committed to sourcing, developing and operating clean, renewable hydroelectric projects in the Province of British Columbia. The Company's impressive development portfolio, representing about 500 MW of potential projects, can provide socio-economic benefits to First Nations and local communities. Successful development of these projects would help British Columbia achieve its required goal of energy self-sufficiency by 2016 and create a legacy of clean, renewable power for future generations.
